EAR MUFFS

COMFORTABLE & DEPENDABLE

www.pipusa.com

V SERIES™ EAR MUFFS

The key to hearing protection is simplicity. Put them on and protect. Little buttons, batteries and radios complicate matters. Get what matters most.

Try something simple for a change.

COLOR CODING

PIP® V Series™ ear muffs have been color coded for easy selection, the green v1™ for low level noise moving through to the red v3™ for use in more extreme environments.

VALUE ENGINEERED FOR PERFORMANCE

Quality and affordability—that's what we mean when we say "value engineered." It's really about functionality redesigned with the user in mind—and there are no compromises on safety and performance. Anything more is complicated.

DEPENDABLE PROTECTION AND COMFORT—WHAT ELSE?

PIP® hearing protective ear muffs are all about protection you put on and it works. Durable and compatible with multiple headgear. Comfortable so they are worn on the ears—not idly around the neck.

MUFF SELECTION

WHAT IS NRR?

Hearing protection is given a Noise Reduction Rating (NRR). The NRR is a measure of the effectiveness of a hearing protection device to reduce noise levels.

EXPOSURE LEVEL

The aim when selecting suitable hearing protection is to achieve an average exposure level of 85dB for the wearer.

OVERPROTECTION

It should be understood that the highest NRR value is not always the most suitable. It is possible to over protect by preventing the wearer from hearing important sounds such as warning signals or approaching vehicles.

EXPOSURE TIME

The amount of time spent in a loud environment can determine which level of protection is required but generally it is based on an 8hr working day.

80-90

SERIOUS NOISE REDUCTION

The Sonis® range has been stylishly designed with a color code for system for easy identification. Materials have been chosen for both performance and comfort for extended periods of use.

UNIVERSAL COMPATIBILITY

The universal slots of JSP helmets enable the easy fitting of the Sonis® ear defenders, along with EVOGuard® visor systems for maximum protection.

ADJUSTABLE STEEL ARMS

The wearer can tilt and adjust the position of the ear cup to refine the fit and increase comfort and performance. Manufactured from steel enabling the arms to maintain performance over a wide temperature range.

COLOR CODING

Sonis® have been color coded for easy selection, the green Sonis®1 for low level noise moving through to the red Sonis®3 for use in more extreme environments.

COMFORT

The cushion materials have been carefully selected to generate a perfect seal. Cushions and foam insert can be easily replaced with hygiene kits available for each model.
